

# SDP Smart Tools

Automate your prepress workflow one step at a time

- Automate Prepress Tasks
- Accelerate Production
- Decrease Errors
- Save Time and Money

# SDP Smart Tools

SDP Smart Tools – because smarter is faster

When it comes to prepress production, you can never be too smart or too fast. That's why Mitsubishi brings you SDP Smart Tools – a family of workflow modules that add value to your SDP RIP by automating virtually all aspects of file preparation.

## Covering the Essentials

The tools cover functions such as remote monitoring, workflow management, PDF creation, preflight and enhanced file viewing. By automating these tasks for your prepress operator, SDP Smart Tools can save time and money throughout your print preparation process. Implementing a PDF workflow will allow you to decrease mistakes during production.

## Smarter Job Flow

The key component of the Smart Tools package is the SDP Smart Manager, a server-based system that controls the flow of your jobs. The client software, which runs on both PCs and Macs, gives your prepress operators the ability to manage jobs without

## Smarter Views

An advanced RIP viewer is another integrated component of the SDP Smart Manager. It allows users to review RIPped files at their workstation, utilizing an integrated ROAM (Rip On A Monitor) soft proofing application. That places quality control at the beginning of your production stream. Your operator can make sure every element of every job is properly positioned before it is sent to the proofer or platesetter. That results in less waste and less do overs.

## Smarter Made Simpler

SDP Smart Tools simplifies the prepress process so even novice operators can drag and drop their way to workflow success. Better still, the system incorporates a PDF workflow, so you can stay in sync with the latest technology used in the industry. In fact, SDP Smart Tools equips you to lead the way and be the first with new benefits.

## Modular Solutions

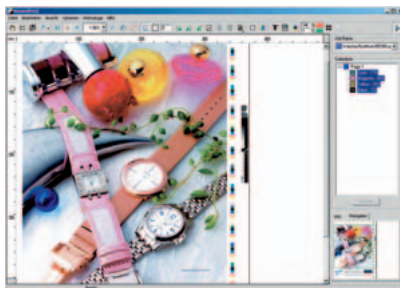

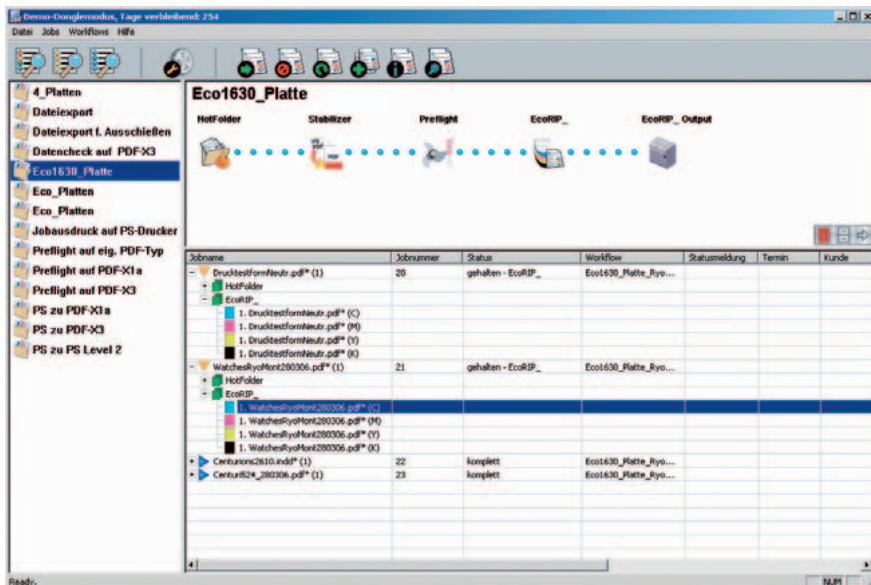

With SDP Smart Tools, you start with the components you need today, then add capabilities as your needs grow. Your initial investment is protected, while your prepress capabilities advance continually to save you time and reduce waste. The modularity of SDP Smart Tools lets you work new functionality and efficiency into your prepress workflow incrementally. That means your operators won't be overwhelmed with too much information at once. SDP Smart Tools lets them advance a step at a time.

## Intelligent Choices

Thanks to its modular architecture, SDP Smart Tools can be configured to precisely match the needs of your shop, today and in the future. Start with the Smart Manager and add components such as the PDF Generation & Preflight Module as your business warrants.

## Automated Advantages for All

The bottom line strength of SDP Smart Tools is that they provide facilities like yours with access to automated advancements that used to be big printer exclusives. That means SDP Smart Tools give you the productive power to compete and win. Mitsubishi can give you the details on automating your workflow a step at time with SDP Smart Tools. Contact us today to learn how.

## Software Requirements:

Client/Server-Workflow System for Harlequin-based RIP-software from SW 6.0,  
Server: Windows XP/ 2000/2003,  
max. 10 Clients: MacOS/OSX/Win

leaving their workstations. That increases productivity by eliminating trips to multiple workstations to accomplish various workflow tasks. They can view it all on SDP Smart Manager's graphical user interface.

## Smarter Visions

Every aspect and function of SDP Smart Manager is visually appealing and easy to understand and apply. The client window lets your operators cue-up jobs in an order that will best meet client deadlines, easily track proofs and track plate production.
